

Catalogue and documentation of all Finnova integration interfaces on offer

The Finnova Partner Portal is aimed at all interested parties who want to be informed about the integration interfaces (REST APIs) on offer in the Finnova context. In particular, it addresses third-party providers and developers who are interested in developing value-added services (solutions/apps) on the basis of the interfaces provided and making them available to the Finnova Community.

Requirements covered

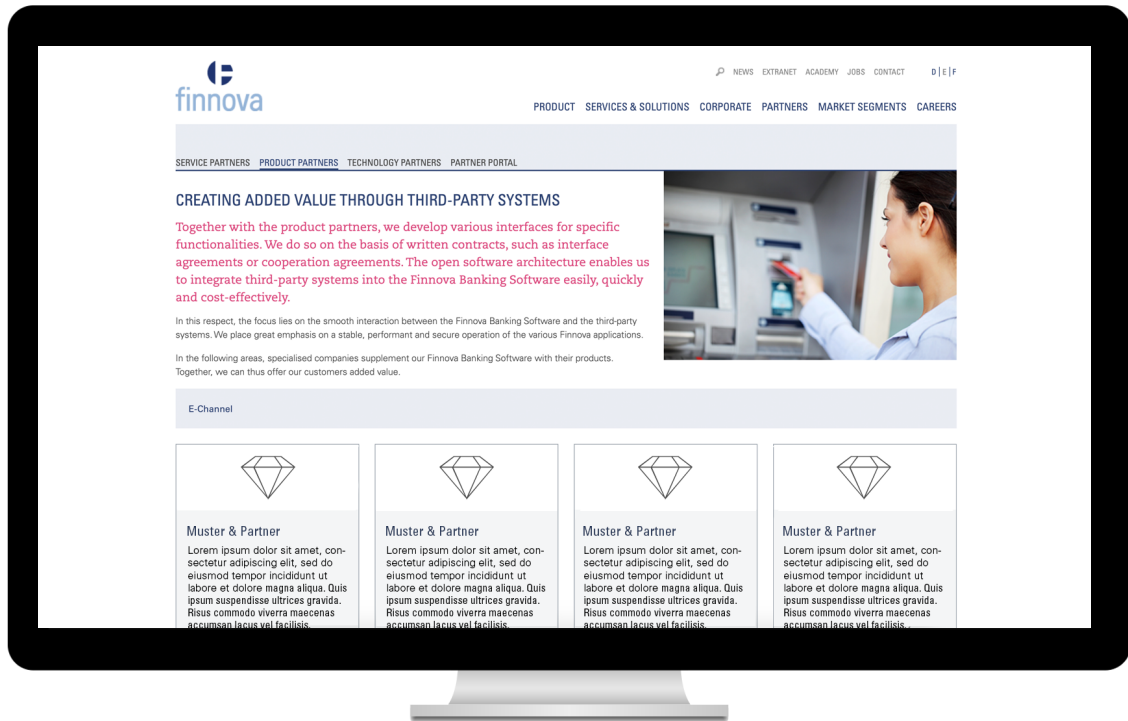

The Finnova Partner Portal provides information about the existing offer of integration interfaces (REST APIs) in self-service mode. To this end, it offers a searchable API catalogue with filter functionality. In addition, the current interface documentation and, where available, links to further information are provided. Furthermore, a Roadmap provides an outlook on the coming developments by Finnova in the area of interfaces.

Access

The API catalogue can be accessed via Finnova's [Partner Portal website](#) and it is free for all Finnova product and technology partners as well as Finnova licence holders. Interested parties who have neither a product nor a technology partnership with Finnova and who are not Finnova licence holders also have the possibility of obtaining access to the Finnova Partner Portal for a fee. You can submit a request via EcosystemOffice@finnova.com.

Showcase

A successful productive connection of a third-party product to the Finnova Banking Software can be included in the Finnova Community showcase via the [Product Partners website](#).

Contact and further information

[Roland Senn](#), Partner Manager Ecosystem, and [Sven Biellmann](#), Product Manager Ecosystem, will be happy to discuss any further questions regarding the Finnova Partner Portal and the possibilities for a partnership with you.
