

PRESS RELEASE

Enterprise Services (EPS) becomes a certified partner of Finnova

Basel/Switzerland, 6 December 2010. **Enterprise Services (EPS) is a newly certified partner of Finnova for the development of applications and functions of Finnova's standard banking solution.**

The standard solution from Finnova is used by around 80 banks in Switzerland. Special functional needs of banks using the solution can be mapped in additional modules, which are developed with the aid of Finnova Development Kits (FDK). These customised applications do not differ in terms of their look and feel from the core banking solution.

Carl Egli, Managing Partner EPS: "We are proud to be a partner of Finnova and to help its customers gain a competitive edge thanks to customised solutions. In conjunction with our test factory and field-tested training method, we prepare bank staff so that they can use the new applications highly effectively."

As a general contractor for IT services, Enterprise Services (EPS) offers solutions for the entire supply chain – namely, from analysis, through specification right up to the development and maintenance of new FDK modules. Enterprise Services is well-known for the development of customised solutions as well as for the parameterisation, installation, testing and integration of standard products such as SAP, Finnova and Avaloq. Its wide service offering also includes the development and marketing of innovative software solutions. The company EPS, with its headquarters in Basel, was founded in 1998 and, as a subsidiary of C1 FinCon, Hamburg, is responsible for the Swiss market. EPS employs around 50 staff.
